

114-7778 SWITCHBOX

MERCURY MARINE 3/6 CYLINDER SWITCHBOX

SHARK BITE!

Mercury Marine replacement switchbox uses a higher rated discharge capacitor for durability. This higher voltage rating allows for longer life and less stress to the circuitry.

CDI Electronics switchboxes are manufactured in a plastic case to eliminate the potential of “shorting” to ground.

- The black ground wire must be connected to the engine ground securely. Loss of ground during normal operation will damage the switchbox
- An additional ground terminal is provided for the engine harness grounds.
- Enhanced circuit design has been designed into this switchbox
- Plastic housing eliminates arcing and corrosion issues
- Two-year warranty from the date of installation.
